If you wish to search through long text files in a more efficient manner, then you'll want to check out the Windows Search Application. From the complex to the simple, this is a useful Windows tool that's suitable for searching through and replacing all kind of data. Searching through your computer's files is a task that's so common that we cannot think of anything better to do when it comes to organizing our files, and there are a few handy applications that make this task very simple. One of them is Windows Search, an amazing tool that allows you to search for all kinds of data, from files and folders to web sites, with little effort. You can also search and replace text inside documents, or even on your hard drive. Windows Search lets you create custom profiles for search queries, organize results in subfolders or sort the output alphabetically. The application can find any kind of file on your hard drive, while also being compatible with networked drives. The intuitive interface is very much like the others of its kind, with all the main features being clearly positioned on the top, where the options to make custom profiles and add to the existing ones are also present. Amongst other features, you can search for web sites, e-mails, images, documents, multimedia files and so on. Moreover, you can target a file or the folder it is in, while highlighting all its properties in the process. A good example of the application's capabilities is the way you can create custom profiles to target the kind of data you want to look for, which can be done by simply pasting a string of words. In order to make sure you're not looking for something that already exists in your system, there's also a search dialog that lets you add extensions or ignore them. If your search is over, you can open the target, as well as organize and sort your results in order to look for a particular file. As you're looking through your system, you can either add it to a folder for easy retrieval or move the file to a different location. How to Install and Use Windows Search To download and use Windows Search, simply go to the official website below. It will offer you a quick installation file that can be executed directly from your hard drive. Once you've done that, you'll be able to find the application in the Start menu or search for it by typing its name in the Start screen. Type of application: Utilities Description:
